

**EROSION PROTECTION  
ZIMBALI LODGE**

**CASE STUDY**

**PROJECT:** Zimbali Lodge, Ballito, Kwa-Zulu Natal  
**CLIENT:** Moreland Development  
**CONSULTANT:** V.K.E.  
**CONTRACTOR:** Lietch Landscapes

**DATE:** August 1998  
**QUANTITY:** 1 000 m<sup>2</sup>  
**PRODUCT:** **SoilSaver 292**

The Zimbali lodge was built on relatively steep dune slopes, which needed to be landscaped. All the slopes were protected with Kaytech's **SoilSaver**, which is woven from 100% jute yarn, a natural fibre, which is ecologically harmonious, decomposing after the vegetation has established.

The picture on the right shows how **SoilSaver** blends into the natural ground features while helping to prevent erosion.

The picture above clearly shows vegetation growing through **SoilSaver**.
