## CONCRETE CANVAS

## DITCH LINING CASE STUDIES

## Project Info

180sqm

2 linear layers

Malkerns, Swaziland

Concrete Canvas SA

Crop irrigating canal required upgrading during peak irrigation season. Water flow was dammed briefly to allow re-shaping of the existing earth profile and installation of CC5. Hydration was conducted under flow conditions meaning re-commissioning of the canal took place much earlier than previously anticipated. The CC5 was installed in under 2 hours.
